

## Experienced Full Stack React Developer for Contract Position

### Company Introduction

Allovalance is a software start-up focused on strategic prioritization, strategic alignment, and decision-making. The Allovalance platform consists of a software (The Allovalance software) that guides user through a proprietary method (The Allovalance Method) with the help of a consultant (Allovalance certified Decision Coach) to make better decisions that align with your strategic goals. We started in 2017, and currently have a great version of our software but are looking to improve, update, and potentially re-design some parts of it.

The outcome or end result of the Allovalance process is to prioritize a list of projects or alternatives using strategic value, complexity, and urgency.

### Job Description

We are looking for a great full-stack JavaScript developer who is proficient with React.js. Your primary focus will be on maintaining and enhancing an existing isomorphic React application using well-known React.js workflows. The application uses GraphQL extensively, with some use of Redux. You will ensure that these components and the overall application are robust and easy to maintain. You will coordinate with the rest of the team working on different functions in a startup environment. Therefore, a commitment to collaborative problem solving, sophisticated design, and quality product is important. We are currently focused on releasing new features quickly with slightly less emphasis on code quality and completeness.

### Responsibilities

- Developing new user-facing features using React.js
- Building reusable components and front-end libraries for future use
- Enhance the existing features of the software by extending and modifying existing UI elements
- Collaborate with an experienced developer who currently built and maintains the application
- Work with non-technical stakeholders to convert ideas and feature requests into defined tasks and action plans

### Skills

- Strong proficiency in JavaScript, including DOM manipulation and the JavaScript object model
- Ability to work independently and learn on the job as needed with limited guidance and documentation
- Thorough understanding of React.js and its core principles
- Experience with popular React.js workflows (such as Flux or Redux)
- Experience with GraphQL and a JS client library for GraphQL (Apollo, Relay)
- Strong experience with HTML and CSS with the ability to turn task descriptions into production ready HTML
- Experience with NodeJS for the backend code
- Familiarity with newer specifications of EcmaScript
- Experience with data structure libraries (e.g., Immutable.js)
- Experience working with promises in Javascript

- Experience with charting libraries is a plus (D3, Plot.ly)
- Knowledge of isomorphic React is a plus
- Knowledge of modern authorization mechanisms, such as JSON Web Token
- Experience with common front-end development tools such as Babel, Webpack, NPM, etc.
- Ability to understand business requirements and translate them into technical requirements
- Familiarity with Git
